Preparing for Installation

Gathering Necessary Tools and Materials

Having the right tools on hand will make the installation process quicker and smoother. Typically, you'll need:

- Screwdrivers (Phillips and flathead)
- Drill (optional, for mounting)
- Wire stripper or cutter
- Level (to ensure your thermostat is mounted straight)

- Smartphone or tablet (for Wi-Fi setup)
- Honeywell RTH9585WF installation manual (printed or digital copy for reference)

Checking Your Existing Thermostat and Wiring

One of the first steps recommended in the honeywell rth9585wf installation manual is to turn off power to your HVAC system at the circuit breaker to avoid electrical hazards. Then, remove your current thermostat's cover and take a close look at the wiring. It's a good idea to take a photo of the existing setup before disconnecting wires — this will serve as a helpful reference during installation.

Common wire labels you might see include:

- R or Rh (power from the heating transformer)
- Rc (power from the cooling transformer)
- W (heat)
- Y (cooling)
- G (fan)
- C (common wire – provides continuous power)

The presence or absence of a C wire can affect installation, as the Honeywell RTH9585WF often requires a common wire for continuous power. If your system lacks a C wire, the installation manual suggests alternative solutions such as using a C-wire adapter.

Step-by-Step Installation Process

Step 1: Power Off Your HVAC System

Safety first! Always switch off power to your heating and cooling system at the breaker box to prevent shocks or damage during installation.

Step 2: Remove the Old Thermostat

Carefully detach the faceplate and unscrew the mounting plate. Label each wire using the stickers

provided in the Honeywell RTH9585WF installation manual or use your own markers to keep track of connections.

Step 3: Mount the New Backplate

Align the Honeywell thermostat's backplate on your wall. Use a level to ensure it's straight, then mark the screw holes with a pencil. Drill pilot holes if necessary and secure the backplate with the screws provided.

Step 4: Connect the Wires

Attach each wire to its corresponding terminal on the Honeywell RTH9585WF base. The terminals are clearly labeled Rh, Rc, W, Y, G, and C. If your system uses a single transformer for both heating and cooling, connect Rh and Rc wires together using a jumper wire as instructed in the manual.

Step 5: Attach the Thermostat Display

Once wiring is complete, snap the thermostat's display unit onto the mounted backplate. Ensure it clicks into place securely.

Step 6: Restore Power and Begin Setup

Turn the circuit breaker back on to restore power to your HVAC system. The thermostat will power up and guide you through initial setup steps, including language selection and system type configuration.

Connecting Your Honeywell Thermostat to Wi-Fi

One of the standout features of the Honeywell RTH9585WF is its Wi-Fi connectivity, enabling you to control your thermostat remotely via the Honeywell Home app.

Preparing for Wi-Fi Setup

Make sure your home Wi-Fi network is operational and that you have your network name (SSID) and password handy. The thermostat supports 2.4 GHz networks, so verify your router settings if you encounter connectivity issues.

Steps to Connect
