- Flat-head screwdriver
- Measuring tape
- Level
- Allen wrench (sometimes included)

Gathering these tools beforehand ensures you won't have to pause mid-assembly.

Step-by-Step Assembly Instructions

Following the real living 54 inch fireplace console instructions carefully will help you assemble the unit safely and correctly.

1. Assemble the Console Frame

Start by constructing the outer frame. This usually involves attaching side panels to the bottom base and securing them with screws. It's helpful to use a flat, spacious surface to avoid damaging any parts.

Make sure to:

- Align panels precisely before tightening screws
- Use a level to check that the base is even
- Keep screws firm but avoid over-tightening to prevent splitting the wood

2. Attach Shelves and Back Panels

Once the frame is stable, install shelves and back panels as per the diagram in the manual. These parts provide structural support and storage space for media components or decor.

If your console includes cable management features, now is the time to familiarize yourself with their positioning to keep wires tidy.

3. Insert the Electric Fireplace

The electric fireplace insert is the heart of the console. Carefully slide or place the insert into the designated compartment. Depending on the model, you may need to secure it with screws or brackets.

Be cautious during this step as the insert contains electrical components. Avoid forcing it into place and ensure all power cords remain accessible.

4. Connect Power and Test the Fireplace

Before plugging in the unit, double-check that all parts are properly secured. Connect the fireplace insert's power cord to a grounded outlet.

Turn on the unit using the control panel or remote control. Most Real Living fireplaces offer adjustable flame brightness, heat settings, and timer functions. Test these features to confirm everything operates correctly.

Operating Your Real Living Fireplace Console

Understanding how to use your Real Living 54 inch fireplace console will maximize your comfort and safety.

Using the Remote Control

The remote control allows you to adjust settings from across the room. Common functions include:

- Turning the fireplace on and off
- Adjusting flame intensity and color
- Setting heat levels
- Activating timers for automatic shut-off

Keeping spare batteries on hand is a good idea to avoid interruptions.

Manual Controls and Safety Features

In addition to the remote, manual controls are usually found on the fireplace insert itself. These provide a backup in case the remote is lost or malfunctions.

Many models incorporate safety features such as:

- Overheat protection that automatically shuts off the unit
- Cool-to-touch glass fronts
- Tip-over switches if the console is moved unexpectedly

Familiarize yourself with these features to ensure safe operation, especially if you have children or pets.

Placement and Installation Tips

Choosing the right location for your Real Living 54 inch fireplace console is key to both aesthetic appeal and safety.

Ideal Room Setup

Since this console serves as both a heater and entertainment center, placing it in the living room or family room works well. Ensure there is adequate space around the unit for air circulation and easy access to power outlets.

Avoid positioning the console too close to curtains, furniture, or flammable materials.

Level Surface and Wall Clearance

Placing the console on a level floor prevents wobbling and potential damage. Using a level during assembly helps achieve this.

Maintain at least a few inches of clearance between the back of the console and the wall to allow heat dissipation and prevent moisture buildup.

Maintenance and Troubleshooting

Regular upkeep will extend the life of your Real Living fireplace console and keep it functioning smoothly.

Cleaning Tips

Dust and fingerprints can dull the appearance of the console and fireplace glass. Use a soft cloth or microfiber duster to clean surfaces gently.

For the glass front, opt for non-abrasive glass cleaner to avoid scratches.

Common Issues and Solutions

If you encounter problems such as the fireplace not turning on, flickering flames, or remote control unresponsiveness, consider these troubleshooting steps:

- Check that the unit is plugged in and the outlet is functional
- Replace remote control batteries
- Inspect the power cord for damage
- Reset the fireplace by unplugging it for a few minutes
