Exploring Planet Earth 2 Islands Worksheet

Answers

When tackling the planet earth 2 islands worksheet answers, it's important to remember that accuracy and context go hand in hand. The answers should reflect knowledge from the episode but also encourage further exploration and critical thought.

Sample Questions and Answer Insights

- **What makes island ecosystems unique compared to mainland habitats?****
Islands are often isolated, leading to distinct evolutionary paths. This isolation results in unique species not found anywhere else, called endemic species. Limited resources and smaller land areas also contribute to unique adaptation strategies.
- **Name an animal featured in the Islands episode that has adapted uniquely to island life.****
The Komodo dragon, native to Indonesian islands, is a prime example. It has evolved to become the largest living lizard, with a venomous bite and the ability to hunt large prey, showcasing remarkable island adaptation.
- **Why are island species particularly vulnerable to environmental changes?****
Due to their limited habitats and small population sizes, island species often have less genetic diversity, making them more susceptible to diseases, invasive species, and habitat destruction.
- **Explain the role of volcanic activity in island formation.****
Many islands, such as those in the Pacific Ocean, are formed by volcanic eruptions. Over time, lava builds up to create land masses that become new habitats for plants and animals.
- **What conservation measures are critical for protecting island biodiversity?****
Measures include controlling invasive species, habitat restoration, legal protection, and community involvement in sustainable practices.
